What's New in the?

In a project for a movie maker, we were searching for a content management platform to create and deploy business applications. The requirements were: 1) Easy to integrate with external systems and workflows 2) Quick UI development time 3) Fast loading time 4) No need for code 5) No more than 10% of the source code of the system 6) Built with non-monetary resources (external content, images, video...) 7) Based on open standards and web technologies (HTML5, JavaScript, Polymer, Nuxeo Vision...) 8) Of course, Nuxeo being based on the open source and non-profit nature of the whole company, the solution should be fully customizable (easy to update, etc.) We researched a lot of solution: We finally found Nuxeo. We have been using it for a while and we have been impressed by its very easy setup, the fact that you can create and deploy your applications in a few minutes. The UI is well built and you have a clear and complete documentation. The integration with external systems is very easy. It is very simple to update the software, because you have access to the entire source code and you can change it at any time. You can customize your UI and your code at any time. With Nuxeo, you can develop very easily in-house applications for your clients. The design is very good and it is easy to develop your own website using it. It is really light and fast. I can clearly say that we have been very happy with Nuxeo since the beginning. We have no doubt in recommending Nuxeo to other potential clients.
