AutoCAD history In the 1980s, the computer-aided drafting (CAD) industry was very fragmented. Many different tools and techniques were used by different users, and there was a lack of communication among them. By the late 1970s, most of the commercial CAD programs that were available for use in business environments were on mainframe computers. When the market for CAD applications began to grow in the early 1980s, Autodesk developed the first truly commercial CAD application. A major goal of Autodesk at that time was to create a computer-aided design system that would have broad appeal. In the 1980s, Autodesk's vision was to make AutoCAD the CAD application of choice for architects and industrial designers. In 1982, Autodesk began development of AutoCAD, a CAD program for use on microcomputers. Autodesk added mobile and web platforms in the late 1990s. In 2002, Autodesk introduced 2D Design Review, which allowed users to collaborate on drawings through the Internet. In 2003, AutoCAD LT was introduced, with several features and cost-saving capabilities that were similar to those of the consumer version of AutoCAD. A year later, in 2004

The latest release of AutoCAD features dynamic scripting, as it is the first CAD program to incorporate Autodesk's new Spidermonkey scripting engine. Business process management In 2005, Autodesk released ProjectFactory for creating distributed applications, processes and workflows. Authoring The Authoring application is an authoring platform used to create authoring files for the Windows version of AutoCAD. It is available free of charge, as long as the user's primary authoring application is Autodesk Inventor. Portfolio Autodesk Portfolio is a product of the same name designed by Autodesk Labs. It is primarily intended for creating and distributing content, rather than technical applications. An example of this is creating a digital portfolio of your work. Design Review Design Review is a tool within AutoCAD to create "Design reviews" to enable industry peer reviews of projects. Design reviews are specified and recorded within a drawing and are structured as a set of questions that may be asked at a review. The tool automatically generates a form and a sequence of questions based on the design review characteristics specified in the drawing. Design Review can import X-refs and X-ref lines from other drawings and create a review from the specified design review characteristics. The tool also has the ability to receive and respond to comments as well as provide feedback. In 2016, the Design Review tool was discontinued in favor of using AutoCAD documents with reviews in the Inventor application. SmartDraw Autodesk's free mobile app, SmartDraw, is designed for users to create 2D and 3D flowcharts. SmartDraw allows users to build their own flowcharts from templates or fill in the blanks with their own data. SmartDraw has over 30,000 flowchart templates and has been used in dozens of projects and patents. Users can create any kind of flowchart; whether it is used for the creation of a diagram of a new process or the

planning of a product or project. SmartDraw can export to PDF and other file formats. SmartDraw started out as an engineering application designed for a specific type of work process. It focused on making the user more efficient by minimizing user input. SmartDraw users were able to export their work into any engineering software, including AutoCAD, and then use those files in a design review. This tool allowed user's input to be integrated into the design review process. Also in 2006, ca3bfb1094

A left-handed clinker is one who tries to achieve victory through his left hand. When he begins a movement, his left hand will stretch out first in front of the body to move in the right direction, while the right hand will follow. If a left-handed clinker loses this fight, his left hand will end up in the "Hole in the Wall," which is an easy way to win. When a right-handed clinker begins his movement, his right hand will be the first one to stretch out, in which it is good to win. A right-handed clinker is hard to beat. If he loses, his right hand will end up in the "Hole in the Wall."/* * Copyright 2016, OpenRemote Inc. * * See the CONTRIBUTORS.txt file
