What's new in Elden Ring:

What's great is that there is a decent amount of content with lots of replayability. I liked the story and the Dungeon Master Mode. Yes there is a good deal of content, but again, is it enough content to avoid the repetitive nature for...an MMORPG? I'm still on my first night of the game so I don't know my mind on this yet, but I notice my character grind about as quickly as I did in Final Fantasy 14 Ultima 10th saga. A human reduced to a skeleton by Rude Reckoning takes two hours to defeat a single boss, while a Legendary takes about 15-20 minutes. The farming takes about as long as a marathon and while I enjoy speedrunning, it's not my thing. And let's face it; even experienced MMORPG players find themselves avoiding the repetitive quests unless they find a shortcut through them. A lot of the issue I have is a few poorly translated quest names that have me running around trying to figure out which path to take to complete them. Some need dexterity check to pass, some require some sort of mysticism ability, some require air or watercraft, some require a heavy vehicle or vehicle with Dormancy, some require

proper formation using your porter or knight with a MACHETE! Harnessing a behemoth with a dozen hands to blast enemies to pieces is one of the most frustrating quests I have yet to complete. That's all I have so far on the combat, but from what I'm seeing, MMO's tend to suffer from having repetitive questing. Instance dungeons change the nature of the game's progression as well as dealing with players that will decide to automate the gameplay with macros. High population worlds get flooded and being able to find a game live that doesn't suffer from lag is a rare thing. All that combined with graphical performance, game engine limitations, and the industry itself are trying to push the player along towards an MMO's current state. You know what to expect; many MMO's are just like Super Smash Bros. The characters are fun but not many of them shine. Hm, Skyrim is disappointing in its own way as I love Final Fantasy, but well, I'll have to see if Dragon's Dogma is more to my liking now that there are more MMOs in existence. I think it's safe to say you make a good point, sir! Monk Frost King wrote:I'm still on my first night of the game so I don't

y,

What is the math behind lightsaber strength and how it impacts combat effectiveness? Hm, the earliest

ode of the Clone Wars talked about lightsaber lengths. It said that a lightsaber with over twenty times power of a typical lightsaber would cause severe damage to the user. While watching various many-blade fighting techniques from various moons and locales over the last few years, I realized that there is a correlation between the amount of blades and actual in-blade strength. My question: Are there any known methods for increasing in-blade strength? How much does increased blade strength actually help a user in battle? Should I train in blade combat techniques or should I only focus on lightsaber combat skills? A: First of all, the Math behind Lightsaber strength. Lightsaber power is driven by the back of the current's curvature as it passes through the emitter rectricle. As the current moves through the circular emitter Core, the flow of current creates a magnetic field that allows the current to pass through its full curvature. This in turn creates high electromagnetic voltages that when combined with high level of current is called, "lighter power"
